HTML 1

1. Basic Table Structure

An HTML table uses several tags.

The most important ones are:

Tag	Purpose
`<table>`	defines the table
`<tr>`	table row
`<td>`	table data cell
`<th>`	table header

---

2. Creating a Basic Table

Structure

```
<table>
   <tr>
      <td>A</td>
      <td>B</td>
   </tr>

   <tr>
      <td>C</td>
      <td>D</td>
   </tr>
</table>
```

Explanation:

- `<table>` → container of the table
- `<tr>` → row

- `<td>` → cell

Result conceptually:

A	B
C	D

---

3. Table Header `<th>`

The `<th>` tag defines **header cells**.

Headers are usually **bold and centered**.

Example:

```
<table>
    <tr>
        <th>Name</th>
        <th>Age</th>
    </tr>

    <tr>
        <td>Mohamed</td>
        <td>24</td>
    </tr>
</table>
```

Result:

Name	Age
Mohamed	24

---

4. Table Caption

A caption is a **title for the table**.

Syntax:

```
<caption>Title of table</caption>
```

Example:

```
<table>
   <caption>Students</caption>

   <tr>
      <th>Name</th>
      <th>Age</th>
   </tr>
</table>
```

---

5. Table Sections

Tables can be divided into **3 sections**.

Tag	Purpose
`<thead>`	header section
`<tbody>`	body of table
`<tfoot>`	footer

Example:

```
<table>
        <thead>
            <tr>
                <th>Name</th>
                <th>Age</th>
            </tr>
        </thead>
        <tbody>
            <tr>
                <td>Mohamed</td>
```

```
                <td>24</td>
            </tr>
        </tbody>
        <tfoot>
            <tr>
                <td>Total</td>
                <td>1</td>
            </tr>
        </tfoot>
    </table>
```

These sections are useful for **styling with CSS**.

---

6. Table Borders

In older HTML you might see:

```
<table border="1">
```

Example:

```
<table border="1">
        <tr>
            <td>A</td>
            <td>B</td>
        </tr>
</table>
```

Today, borders are usually controlled with **CSS**.

---

7. Column Span (colspan)

Sometimes a cell should span **multiple columns**.

Example:

```
<td colspan="2">Merged Cell</td>
```

Example table:

```
<table border="1">
        <tr>
            <td colspan="2">Header</td>
        </tr>
        <tr>
            <td>A</td>
            <td>B</td>
        </tr>
</table>
```

Result concept:

Header	
A	B

---

8. Row Span (rowspan)

A cell can also span **multiple rows**.

Example:

```
<td rowspan="3">R</td>
```

Example table:

```
<table border="1">
        <tr>
            <td rowspan="2">A</td>
            <td>B</td>
        </tr>
```

```
        <tr>
            <td>C</td>
        </tr>
</table>
```

---

9. Aligning Table Content

Content inside cells can be aligned.

Example:

```
<th style="text-align:center;">Name</th>
```

Common alignments:

- left
- center
- right

---

10. Column Group `<colgroup>`

`<colgroup>` is used to style **entire columns**.

Example:

```
<table>

        <colgroup>
            <col span="1" style="background:red">
            <col span="1" style="background:#DDD">
            <col span="1" style="background:green">
```

```
        </colgroup>

        <tr>
            <td>A</td>
            <td>B</td>
            <td>C</td>
        </tr>

        <tr>
            <td>D</td>
            <td>E</td>
            <td>F</td>
        </tr>

    </table>
```

A	B	C
D	E	F

---

11. Summary

Main table tags:

Tag	Purpose
`<table>`	table container
`<tr>`	row
`<td>`	data cell
`<th>`	header cell
`<caption>`	table title
`<thead>`	header section
`<tbody>`	body
`<tfoot>`	footer

Tag	Purpose
`<colgroup>`	style columns

Attributes:

Attribute	Purpose
`border`	table border
`colspan`	merge columns
`rowspan`	merge rows

Practice 1

Assignment 01

- Make sure the table fills the entire screen.
- You can write any names and data you want.
- The image size must be 40x40.
- You can add any link you want; there's no problem, but the most important thing is that the link opens in a new page.
- You must use only HTML elements to accomplish the task.
- The first name must be on one line, and the second name on a line below it.
- If the first person has more than one email address, a line break must be placed between them.
- Add a caption to the table containing the phrase "Members Data".

You must complete the task exactly as shown in the following image

You must complete the task exactly as shown in the following image.

Group	Avatar	Name	Email	Character	Profile
Ninja		Osama Mohamed	o1@nn.sa o2@nn.sa	©	Profile
		Shady Nabil	s@nn.sa	™	Profile
Monsters		Mohamed Ibrahim	m@nn.sa	®	Profile
Total Members					3

Help

Find the table's width attribute.

Find rowspan to merge.

You can add images from the Placeholder website. See the explanation here

Assignment.02

Create the shape shown in the image using only HTML.

Table Caption

Date	Name	Points
Month	Osama Mohamed	100
	Sayed Mohamed	100
	Ahmed Mohamed	100
	Eman Mohamed	100

Help

`cellspacing`, `cellpadding`. Look up table properties such as

When you learn CSS, you will be able to create these properties without using them as attributes

Challenge

Assignment_03

Create the shape shown in the image using only HTML.

Complex Table

Year	Group	Language	Done	Passed
2022	Elzero	HTML	Yes	
		CSS	Yes	
	Heroes	JS	Yes	No
		PHP	Yes	
		Python	No	No
